

# **Do you know all the facts about the Covid-19 injections?**

**True informed consent demands that you understand all risks and benefits.**

**Do you know that:**

- 1. The experimental Covid-19 injections are not FDA approved (Emergency Use Authorized only).**
- 2. mRNA injections are not technically “vaccines,” but an experimental gene therapy where a modified genetic message is inserted within a toxic lipid nano-particle coating to enter multiple cells throughout the body.**
- 3. The spike protein produced by the injection is toxic to cells and can cause multiple adverse effects.**
- 4. Unlike natural immunity, it is unlikely that the injections will confer lasting immunity.**
- 5. Traditional vaccines require 12–20 years of testing prior to release. These injections were released after only 8 weeks of study on adults.**
- 6. There are no studies on the long-term safety of these injections, especially for children.**
- 7. All children, regardless of weight, receive an adult dose of the injection. There is no research on the impact of this dosing.**
- 8. You are solely financially responsible for any adverse effects from these injections.**
- 9. For those under 30, the risk of death or adverse outcomes from Covid-19 is considerably smaller than the injection’s risk of death or adverse effects, eg, myocarditis, anaphylaxis, blood clots, severe skin rashes, abnormal menstrual bleeding, spontaneous abortions, etc.**
- 10. You should report all vaccine adverse reactions to the CDC: [info@VAERS.org](mailto:info@VAERS.org) or 1-800-822-7967.**
