

# Vaccine Facts: True or False?

**Questioning confusing claims about vaccine science? Overwhelmed by the volume of information?  
Take the true/ false quiz below. For answers and documentation see: [VaccineFacts.info](http://VaccineFacts.info)**

See this web tool illustrated by John Travis, MD, <JWTravis2@gmail.com> at [TinyURL.com/jwtATW6](http://TinyURL.com/jwtATW6)

1. The safety and efficacy of vaccines has been unequivocally proven. (True or false?)
2. The CDC regularly carries out vaccine safety studies. (True or false?)
3. Vaccine science is openly presented and discussed through free exchanges in scientific journals and Internet platforms. (True or false?)
4. The US childhood vaccination schedule has been tested against inert placebos and the safety of its combinations of vaccines well established over sufficient time periods.
5. The US Agency for Healthcare Research and Quality found that vaccine injuries occur in one out of 39 doses given, yet fewer than 1% of all injuries are reported.
6. US Vaccine manufacturers are legally liable for injuries caused by their vaccines and can be sued for damages.
7. Vaccinated children are healthier than unvaccinated children.
8. The number of US children with chronic diseases increased from 13% to 54% between 1994 and 2007, which correlates more closely with the increase in the number of required child vaccinations than any other causative factor.
9. The US pharmaceutical industry significantly funds the CDC, maintains a revolving door for retiring CDC executives, and its lobby spends more than twice the fossil fuels lobby.
10. Polio and tetanus vaccines have saved millions of lives and are crucial components of public health.
